INTERACTION DESIGN

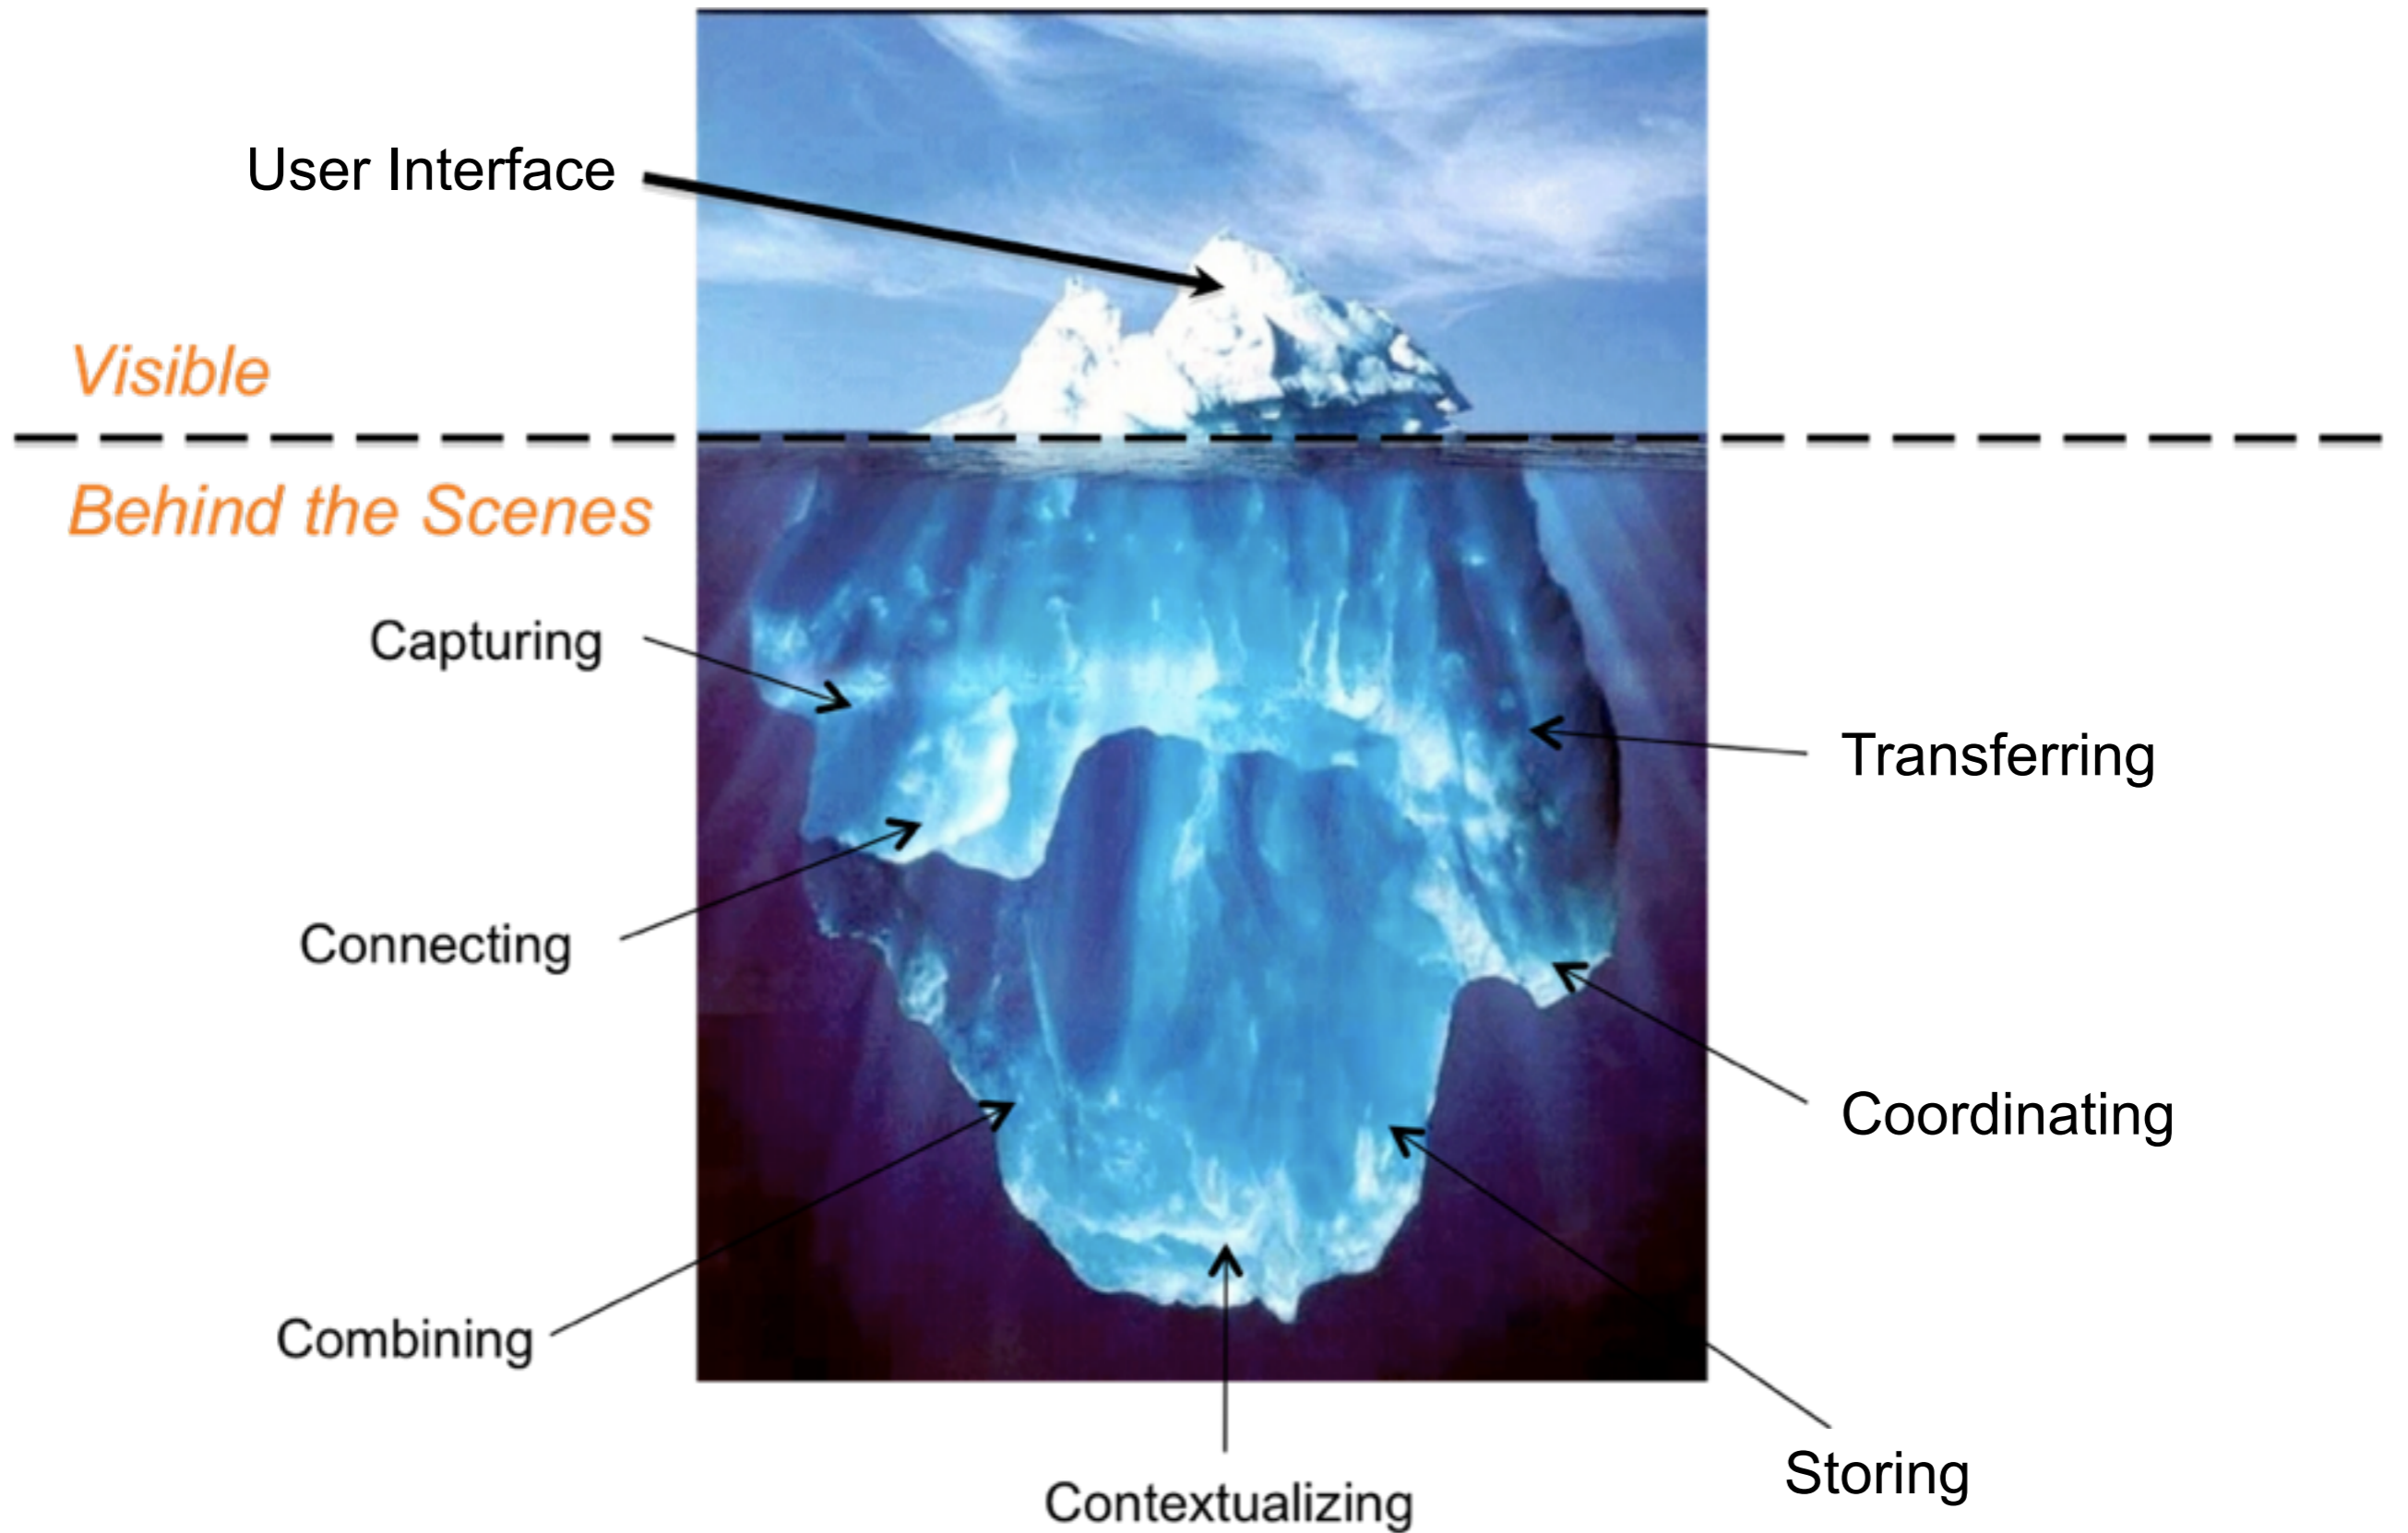

Like all forms of design, visual design is about problem solving, not about personal preference or unsupported opinion.

Bob Baxley

Interface design is only the experienced **representation** of the interaction, not the interaction design itself.

Today's featured article

The **Cross of Gold speech** was delivered by [William Jennings Bryan](#), a former congressman from [Nebraska](#), at the Democratic National Convention in [Chicago](#) on July 9, 1896. In the address, Bryan supported [bimetallism](#) or "free silver", which he believed would bring the nation prosperity. He decried the [gold standard](#), concluding the speech, "you shall not crucify mankind upon a cross of gold". Bryan's address helped catapult him to the [Democratic Party's](#) presidential nomination; it is considered one of the greatest political speeches in American history. For twenty years, Americans had been bitterly divided over the nation's [monetary standard](#). Many Americans believed bimetallism (making both gold and silver [legal tender](#)) was necessary to the nation's economic health. Bryan's speech, delivered at the close of the debate on the [party platform](#), electrified the convention and is generally credited with getting him the nomination for president. However, he lost [the general election](#) to [William McKinley](#) and the United States formally adopted the gold standard in 1900. [\(more...\)](#)

Visual Clutter

Clutter creates visual noise and
makes an application hard to use

Proximity & Grouping

By grouping similar elements together, the designer helps the user deal with a complex information display by reducing it to a manageable number of units.

Primary Action / Secondary Action

All form actions are not equal, and therefore the visual presentation of actions should match their importance to make it easier to complete a form.

Visual distinction helps users make “good” choices.

Example: "Web Design, Filling the Blanks"

Yammer

Constraint

source : [2]

Constraints are closely related to real affordances: For example, it is not possible to move the cursor outside the screen: this is a physical constraint.

Locking the mouse button when clicking is not desired would be a physical constraint. Restricting the cursor to exist only in screen locations where its position is meaningful is a physical constraint.

Scalability of Interfaces / Flexibility

80/20 rule

source : [1]

A principle for setting priorities: users will use 20% of the features of your product 80% of the time. Focus the majority of your design and development effort (80%) on the most important 20% of the product.

Users are overwhelmed by options, limitless flexibility

Only show me what I need to see

Implement one easy to discover and easy to learn core pattern for common actions across the platform.

Adjust to users' preferences.

Make less common actions harder to reach.

Aesthetic-Usability Effect

source : [1]

Aesthetic-Usability Effect

Aesthetic designs are perceived as easier to use than less-aesthetic designs.

Aesthetic designs look easier to use and have a higher probability of being used, whether or not they actually are easier to use.

source : [1]

The flexibility-usability tradeoff is exemplified in the well known maxim “jack of all trades, master of none”.

Flexible designs can perform more functions than specialised designs, but they perform the functions less efficiently.

Color

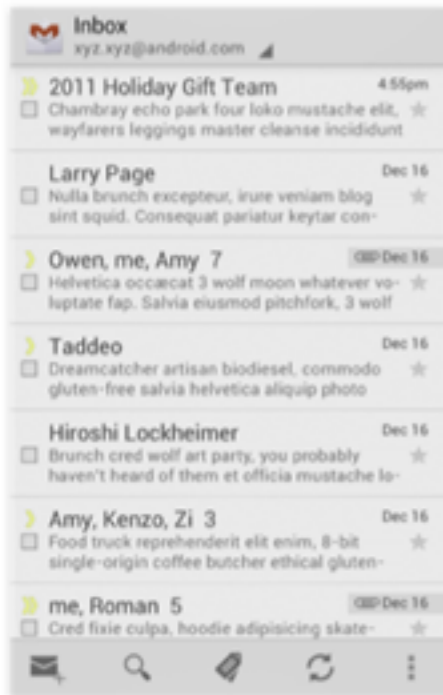

HSV Color Space

- three main properties: hue, saturation (or intensity) and value (or brightness)
- hue refers to the color itself (the particular color within the optical (visible) spectrum of light), saturation refers to the brightness, value refers to the amount of black in a color

- color can provide cues for use
- color can establish a relationship
- color can indicate importance
- consider human factors such as color blindness and cultural differences

Contrast

Effective design creates no more contrast than necessary.

This allows the viewer to easily identify the elements in question as a strongly defined subset of the available information.

Symmetry

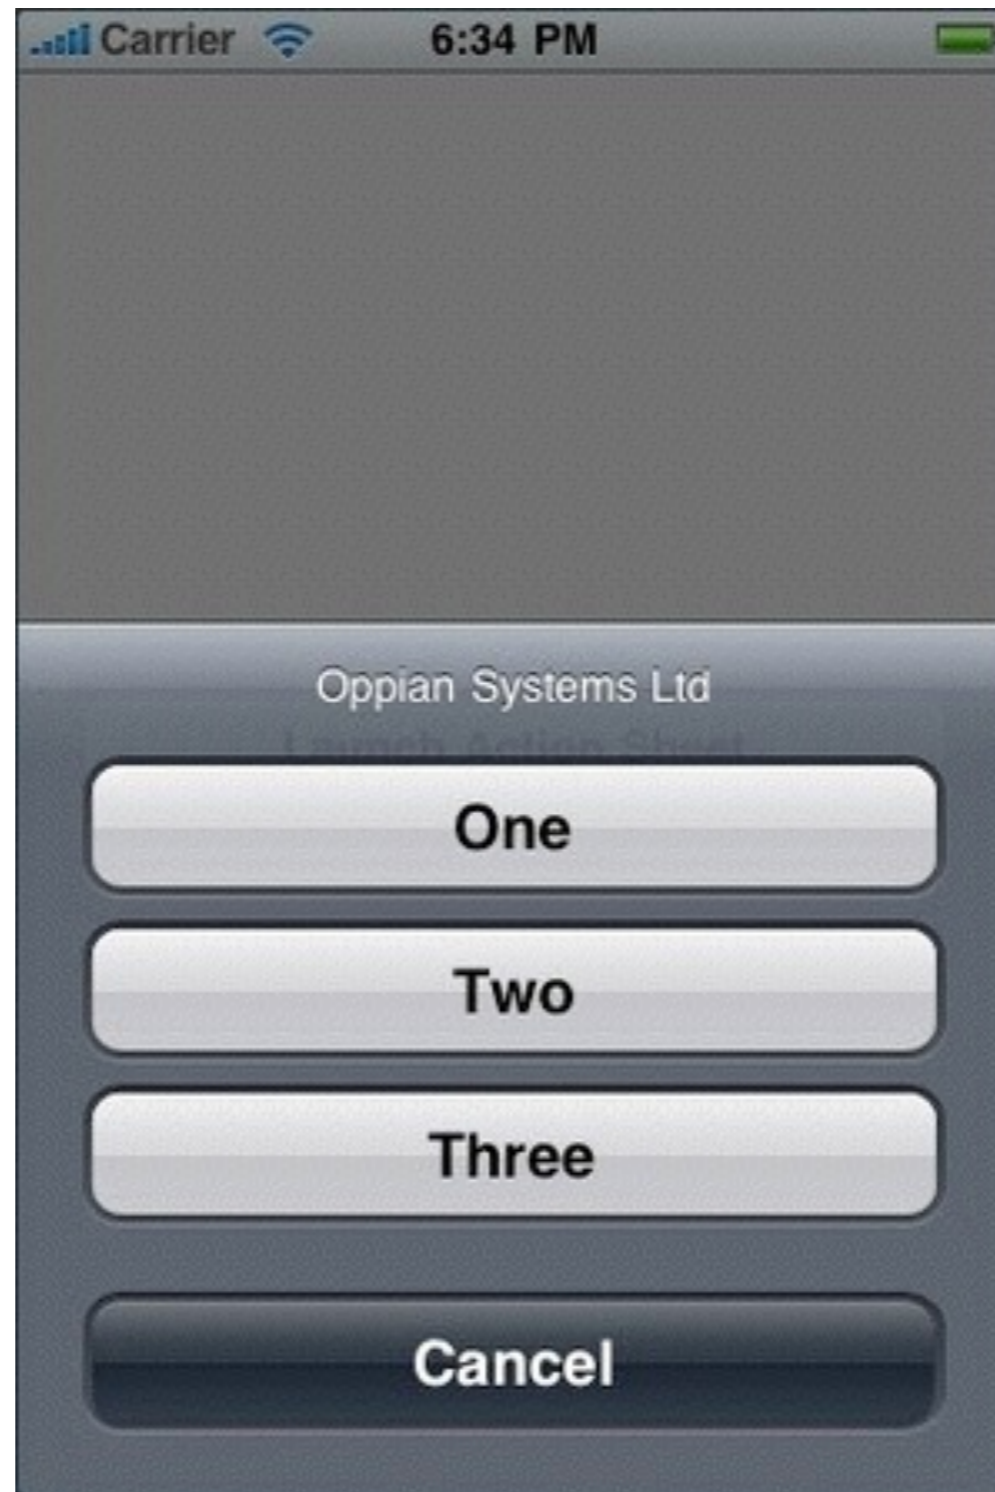

source : [2]

Symmetry ensures balance and clear organisation, if sometimes at the expense of visual interest. While this may be a drawback for a poster or retail packaging, it is perfectly appropriate for a user interface.

Graphical User Interface Design

- Principles
- Layout, Typography, Color & Contrast
- Controls and Widgets
- Simplicity

Simplicity

Approachability

Simple designs can be rapidly apprehended and understood well enough to support immediate use or invite further exploration.

Recognisability

Simple designs can be recognised more easily than their more elaborate counterparts. Because they present less visual information to the viewer, they are more easily assimilated, understood and remembered.

Immediacy

Simple designs have a greater impact than complex designs, precisely because they can be immediately recognised and understood with a minimum of conscious effort.

Usability

Improving the approachability and memorability of a product necessarily enhances usability as well. Simple designs that eliminate unnecessary variation or detail make the variation that remains more prominent and informative.

source : [2]

Reduction through successive refinement is the only path to simplicity
