

# Workshop

## User Experience Design III

### (Concept Development)

Lecturer: Alexander Wiethoff

Tutorials and Organization: Steeven Villa & Fiona Draxler

External Lecturer: Marin Zec (HM München)

In der Lehrveranstaltung

# User Experience III

ist das Ziel **eigenständig** ein innovatives

**Interaktionskonzept** zu erarbeiten und teilweise,  
mittels eines Prototypen, umzusetzen.

In Teams wird der **iterative UX Designprozess** und seine einzelnen

Phasen praktisch umgesetzt und **theoretisches Wissen**

**verfestigt**. Eine abschließende Experten **Evaluierung** liefert erste

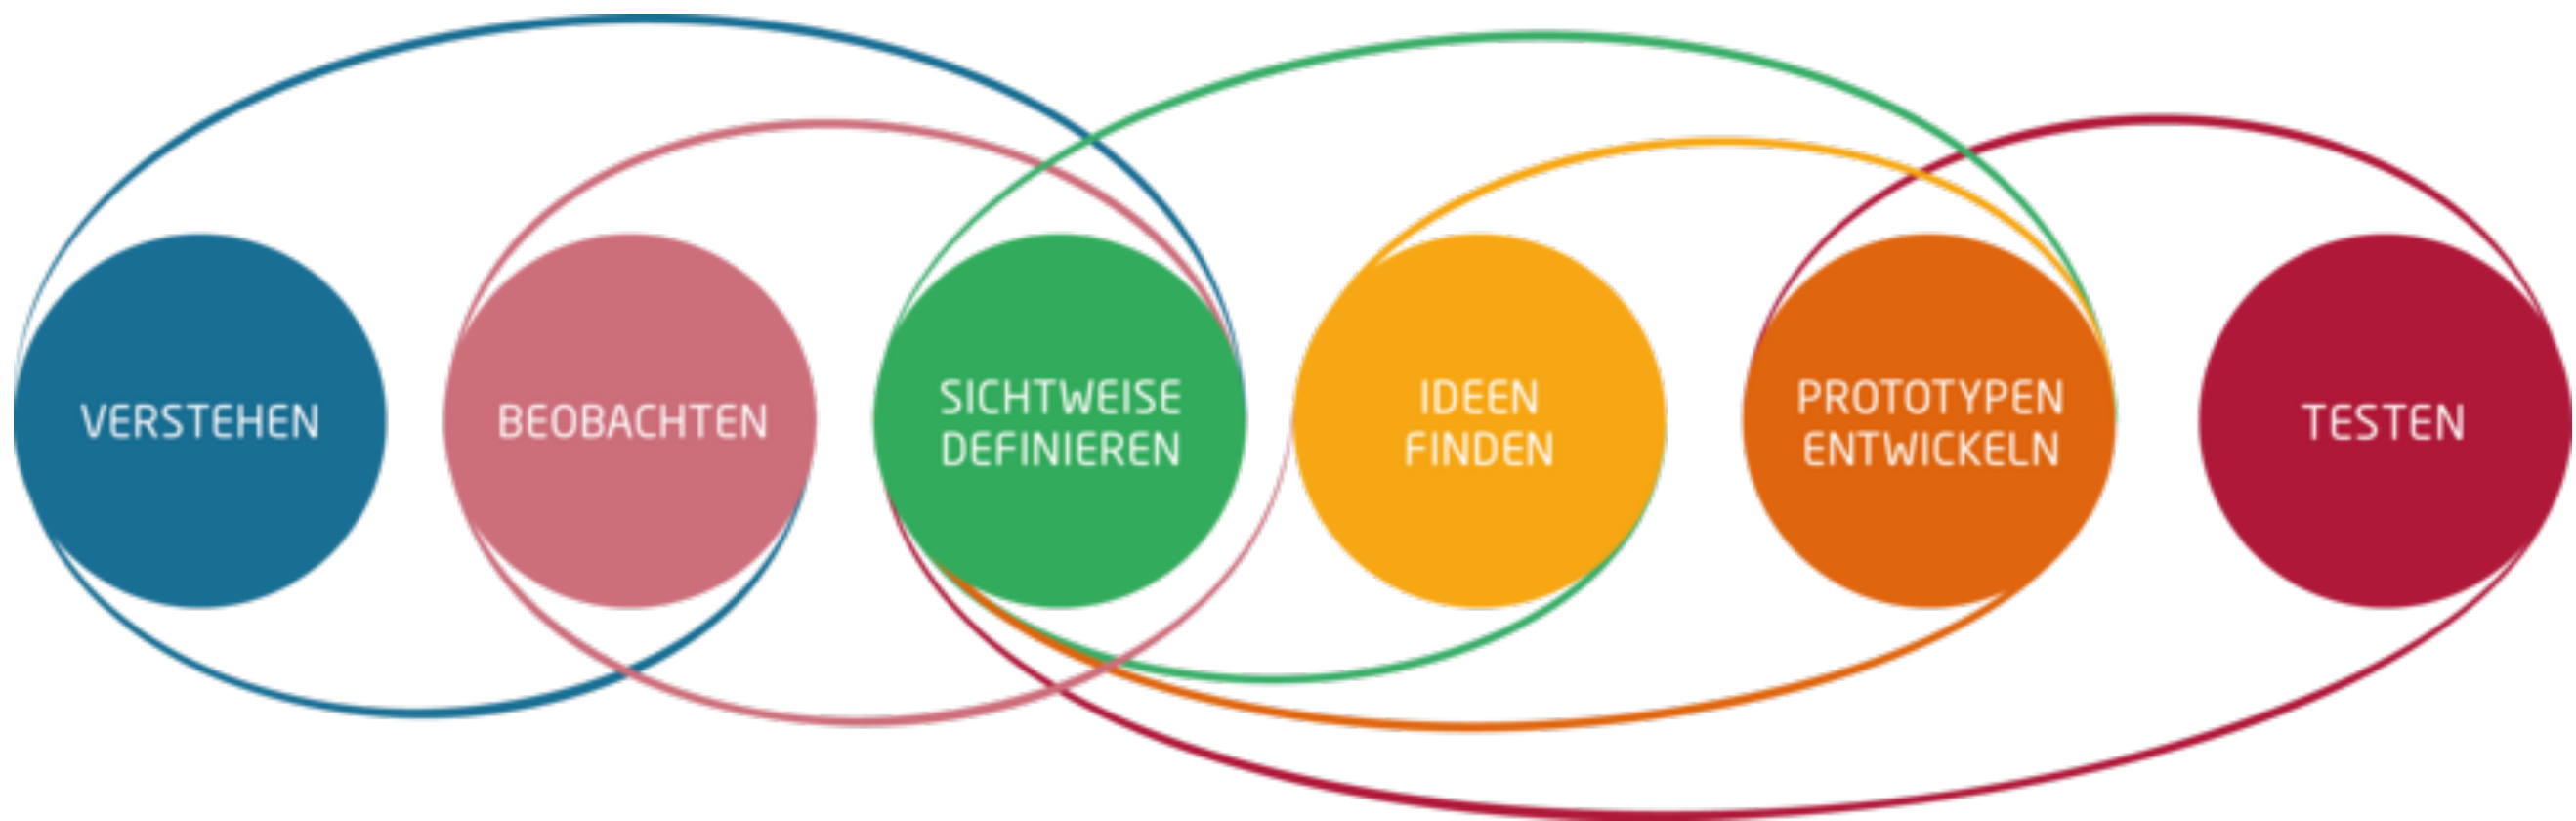

Aufschlüsse in wieweit das Designkonzept Chancen auf eine weitere

Entwicklung hat. Die Grundlagen aus der vorausgegangenen

Lehrveranstaltung **UX I (IxD)** bieten das notwendige

Vorwissen um das Modul erfolgreich zu absolvieren.

# UX / Design Thinking

# Ergebnisse

- **Praktische Umsetzung des iterativen UX Designprozess**
- **Arbeit mit UX Tools + Anwendung**
- **Kreative Arbeit im Team an eigenem Projekt**
- **Videoprototyp (UX Präsentationstool)**
- **Öffentliche Präsentation (Firmen, Professoren)**
-

# Ablauf

## Woche 1:

- UX Research
- UX Tools & Iterative Entwicklung des Design Konzepts

## Woche 2:

- Erste (halb) öffentliche Präsentation des Projekts
- Iterative (Weiter-) Entwicklung des UX Design Konzepts
- Videodreh & Videobearbeitung (UX Prototyping)
- (Halb-) Öffentliche Präsentation

# Organisation

**Blockpraktikum: 25.09 – 06. Okt 2023 (09:00-17:00)**

Räume: Oettingenstr. 67, L 155 + TBD

## **Bedingungen für das Bestehen:**

Anwesenheit (Teilnehmerliste oder Attest) Dokumentation

(Fotos, Videos, Blog) Präsentationen

Motivierte Mitarbeit im Team

Gruppenarbeit

**(Einteilung heute)**

# Heute

**1.) Themenstellung**

**2.) Aufgaben bis zum Praktikum**

**3.) Gruppeneinteilung**

### Abstract

By decomposing the image formation process into a sequential application of denoising autoencoders, diffusion models (DMs) achieve state-of-the-art synthesis results on image data and beyond. Additionally, their formulation allows for a guiding mechanism to control the image generation process without retraining. However, since these models typically operate directly in pixel space, optimization of powerful DMs often consumes hundreds of GPU days and inference is expensive due to sequential evaluations. To enable DM training on limited computational resources while retaining their quality and flexibility, we apply them in the latent space of powerful pretrained autoencoders. In contrast to previous work, training diffusion models on such a representation allows for the first time to reach a near-optimal point between complexity reduction and detail preservation, greatly boosting visual fidelity. By introducing cross-attention layers into the model architecture, we turn diffusion models into powerful and flexible generators for general conditioning inputs such as text or bounding boxes and high-resolution synthesis becomes possible in a convolutional manner. Our latent diffusion models (LDMs) achieve new state-of-the-art scores for image inpainting and class-conditional image synthesis and

Figure 1. Boosting the upper bound on achievable quality with less aggressive downsampling. Since diffusion models offer excellent inductive biases for spatial data, we do not need the heavy spatial downsampling of related generative models in latent space, but can still greatly reduce the dimensionality of the data via suitable autoencoding models, see Sec. 3. Images are from the DIV2K [1] validation set, evaluated at  $512^2$  px. We denote the spatial downsampling factor by  $f$ . Reconstruction FIDs [29] and PSNR are calculated on ImageNet-val. [12]; see also Tab. 8.

results in image synthesis [30, 85] and beyond [7, 45, 48, 57], and define the state-of-the-art in class-conditional image synthesis [15, 31] and super-resolution [72]. Moreover, even unconditional DMs can readily be applied to tasks such as inpainting and colorization [85] or stroke-based syn-

# Midjourney

Midjourney is an independent research lab exploring new mediums of thought and expanding the imaginative powers of the human species.

Self-funded team focused on design, human infrastructure, and AI.

11 full-time staff and a set of advisors.

Founded: July 2022

Release of V4: November 10th 2022

Release of V5: March 15th 2023

Release of V5.1: May 4th 2023

CEO

David Holz

Previously: Founder Leap Motion, Researcher at NASA, Max Planck

## AI Magic Tools

- All
- Generative
- Image
- Video
- 3D
- Audio

**Text to Image**  
Generate images from text descriptions

**Erase and Replace**  
Erase and replace parts of an image with generated content

**Text to Color Grade**  
Color grade your video with only text

**Super-Slow Motion**  
Turn any video into a smooth slow motion video

**Image to Image**  
Modify an existing image with text

**Infinite Image**  
Expand an image by generating outside the original canvas

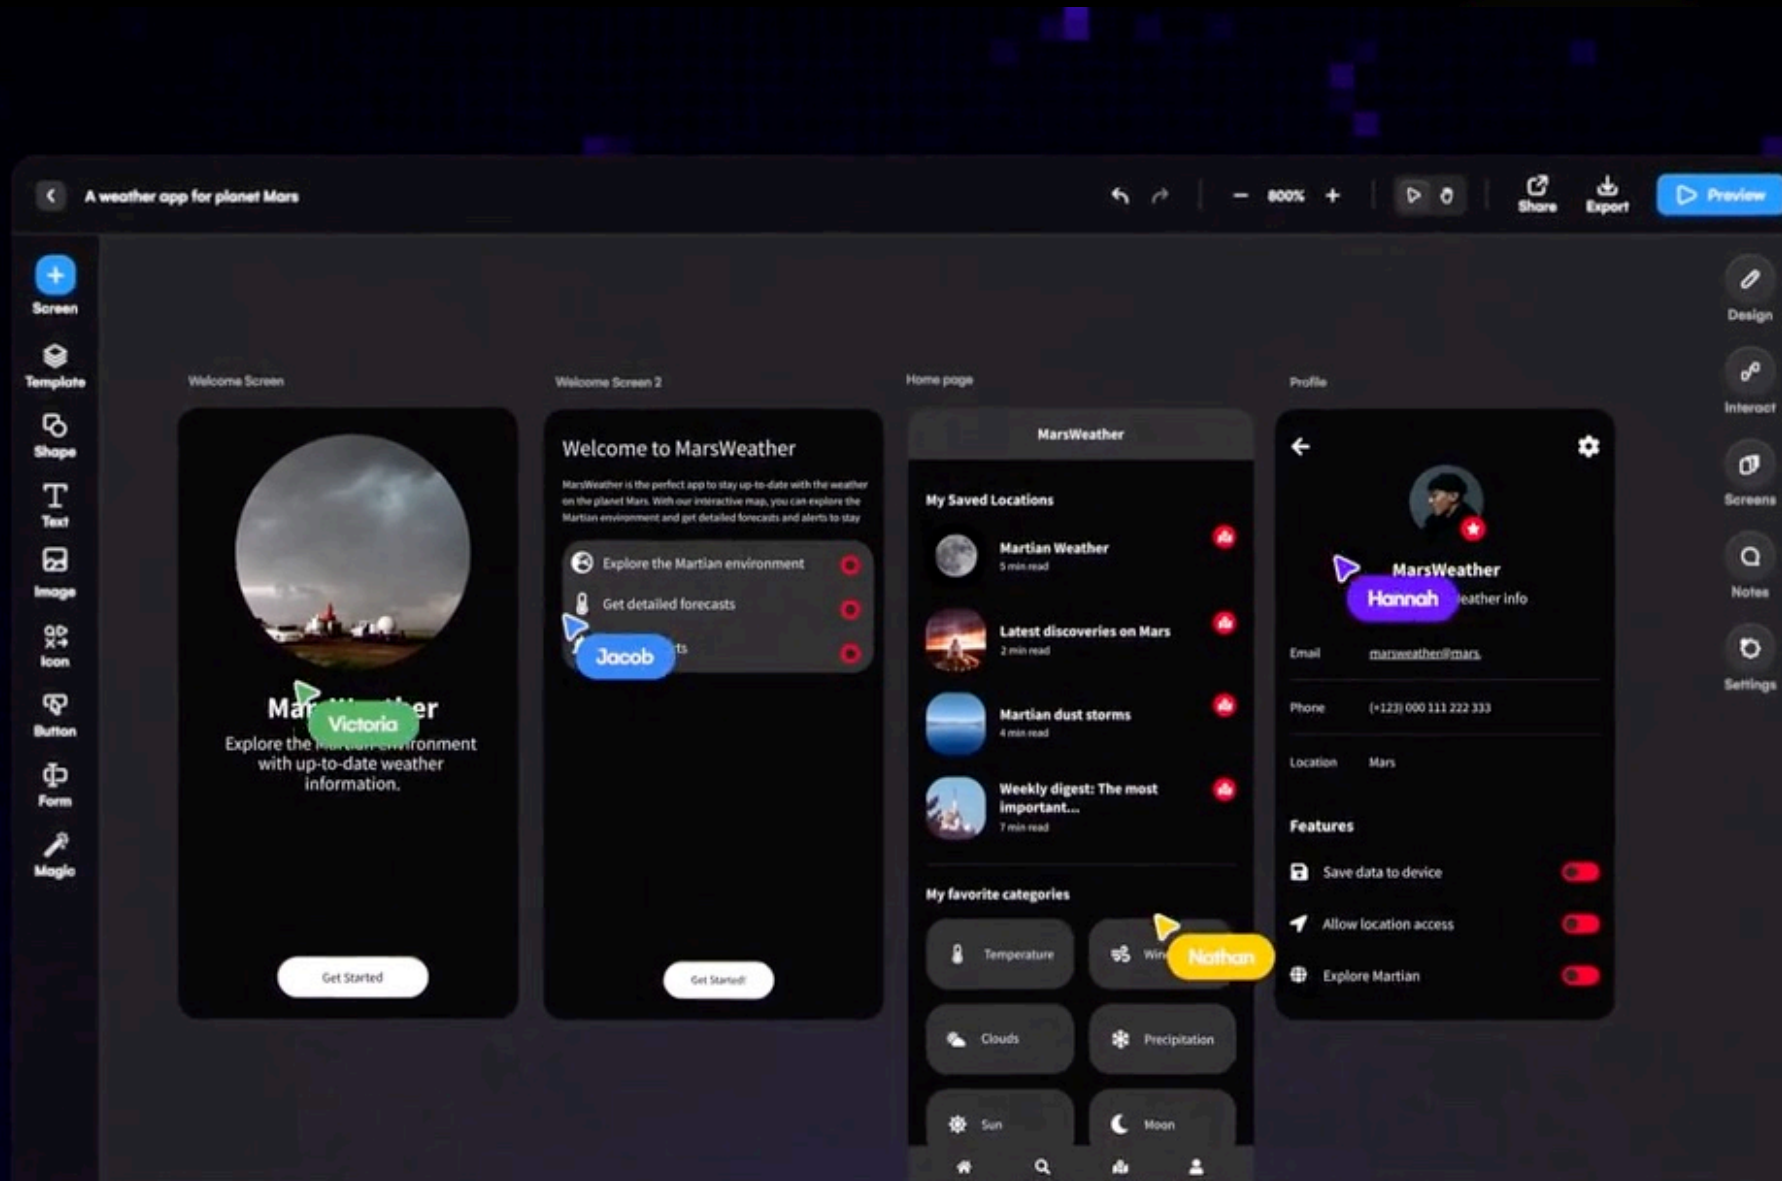

**Frame Interpolation**  
Create an animated sequence video from uploaded images

**AI Training**  
Easily create unique images of a specific object or style

# May 2023: Uizard Autodesigner

# 5 Halb-Halb-Strukturierte Interviews

mit: UX/UI Designern,  
Kommunikations/Grafikdesigner,  
Industriedesigner, Agenturen (z.B.  
Designaffairs, Frog Design, IDEO...  
etc.)

Kein: Skype, Zoom, Teams etc.  
erlaubt

**In-context Interview (Contextual Inquiry - CI)**

**Figure 3.1:** Contextual interviews in different life contexts: work, home, and car. Interviews are conducted wherever the activities of interest take place.

# Contextual Inquiry (CI)

Holtzblatt, K., & Jones, S. (1993). Contextual inquiry: A participatory technique for system design. *Participatory design: Principles and practices*, 177-210. (458 citations on Google Scholar/25.01.2018)

Contextual Design is a user-centered design process (UCD) that uses in-depth field research to drive innovative design. Contextual Design was first invented in 1988 and has since been used in a wide variety of industries and taught in universities all over the world (K. Holtzblatt)

# ANALYSIS

**Definition of the system**  
What is the problem?

# EVALUATION

**Possible alternatives**  
What future do we want?

# SYNTHESIS

**Design of final solutions**  
What do we implement?

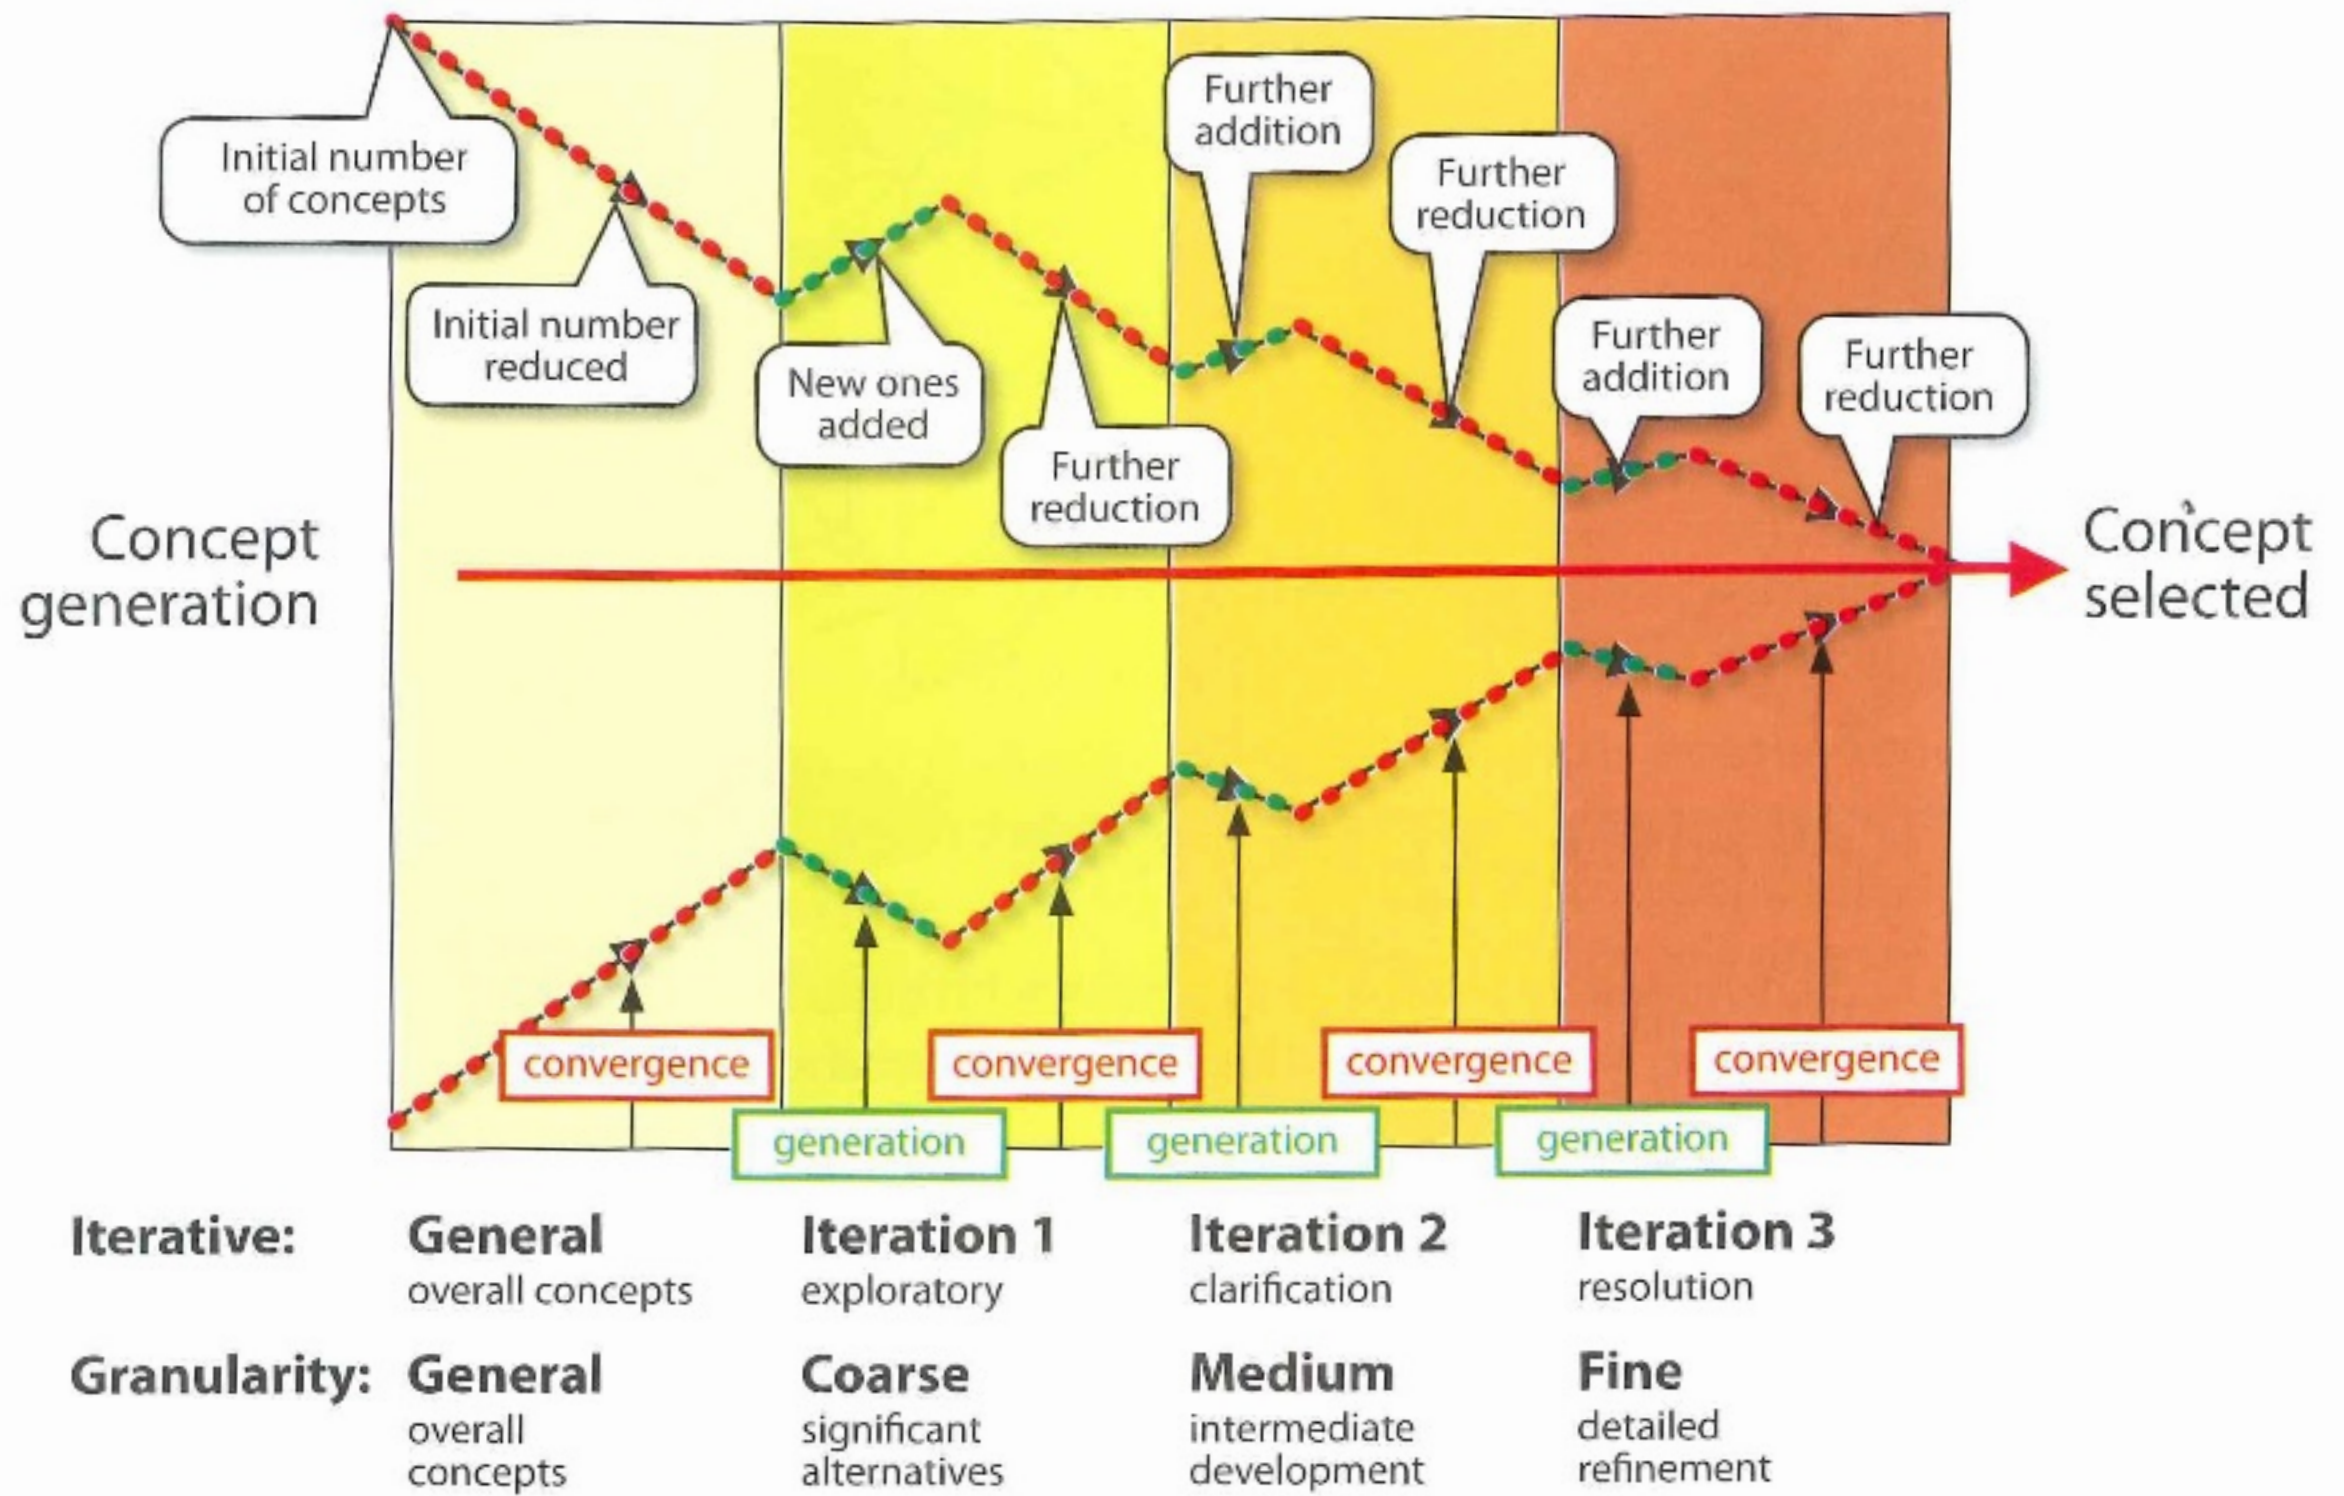

The designer is a  
'problem-scouter'

The designer is a  
'story-teller'

The designer is an  
'executor'

Deliverable - 25.09:  
Interviewplan + Questions

# Interviewplan (immer zwei Teammitglieder pro Interview)

<b>Interview Partner</b>	<b>Teammitglied</b>	<b>Termin</b>
Kurt Müller (Schule YX)	Andy Bauer Assistenz: Ina Müller	20. September, 14:00
...		

# Interviewleitfaden

- Welche Fragen werden Sie stellen?  
(Minimum 10 Stück)
- Welche Antworten erwarten Sie?
- Welche dieser Fragen sind am interessantesten und sollten auf jeden Fall gestellt werden?

**Deliverable - 28.09:**

**5 transcribed interviews**

Good documentation shows context, interesting details and interview partners...

..not (only) your group!

**Minuten**

25.09 09:00 (c.t.)

- 1.) Nutzergruppe vorstellen (mit Bild)
- 2.) (Semi-Structured) Interview präsentieren
- 3.) 5 Interview Termine mit Personen  
aus der Zielgruppe vorstellen (25.09 ab 11:30 oder  
26.09 oder 27.09 ganztägig)
- 4.) Observationsleitfaden

**see you! 25.09 09:00 (c.t.)**

**Oettingenstr. 67, L 155**
